

Vishal Kumar Allam

San Francisco, CA | 816-666-2813 | itsmevishal36@gmail.com | **Work Authorization: H1B**

PROFESSIONAL SUMMARY

- Quality Engineering and Test Automation professional with over **6+ years** of experience building scalable automated testing and reliability practices across consumer-facing web, mobile, API, backend, and cloud-based applications.
- Strong hands-on expertise with **Playwright, Appium, Espresso, XCTest, Selenium WebDriver, Python, TypeScript, Java, C#, REST APIs, and SQL**, developing maintainable unit-supporting, integration, end-to-end, and performance automation.
- Experienced building quality infrastructure in **zero-to-one and modernization environments**, establishing test architecture, automation standards, CI/CD guardrails, reusable test utilities, and production-readiness practices from the ground up.
- AI-native engineer using **Claude, Cursor, GitHub Copilot, and LLM-assisted workflows** to generate and refine tests, diagnose failures, improve coverage, analyze production issues, and accelerate automation maintenance.
- Strong CI/CD experience integrating automated suites with **GitHub Actions, Azure DevOps, Jenkins, GitLab CI, and Git**, enforcing quality gates on every commit and preventing critical regressions from reaching production.
- Reliability-focused engineer experienced with **production monitoring, alerting, observability, incident response, root-cause analysis, SLOs, error budgets, latency, availability, and failure-trend analysis** across distributed applications.
- Collaborative engineer who partners closely with developers and DevOps teams to embed quality throughout the development lifecycle, communicate risk clearly, improve system resilience, and enable teams to ship quickly with confidence.

EDUCATION

University of Missouri Kansas City

"Master of Science" in Computer Science

Kansas City, MO

Jan. 2023 – May 2024

Jawaharlal Nehru Technological University

"Bachelor of Technology" in Computer Science

Hyderabad, India

Aug. 2015 - May 2019

TECHNICAL SKILLS

- **Programming & Engineering:** Python, TypeScript, JavaScript, Java, C#, SQL, Bash, REST APIs, JSON, Object-Oriented Programming, Clean Code, Backend Services.
- **Automation Frameworks:** Playwright, Appium, Espresso, XCTest, Selenium WebDriver, Cypress, Pytest, JUnit, TestNG, NUnit, RESTAssured, Mobile/UI/API Automation.
- **Testing & Reliability:** Unit Testing, Integration Testing, End-to-End Testing, Regression Testing, Performance Testing, Load Testing, Smoke Testing, Reliability Testing, Production Validation.
- **AI-Assisted Quality Engineering:** Claude, Cursor, GitHub Copilot, AI Test Generation, AI Failure Diagnosis, Automated Coverage Expansion, Test Refactoring, Intelligent Regression Analysis, AI-Assisted Debugging.
- **CI/CD & DevOps:** GitHub Actions, Azure DevOps, Jenkins, GitLab CI, Git, CI/CD Pipelines, Quality Gates, Per-Commit Validation, Parallel Test Execution, Build/Release Automation.
- **Observability & Operations:** Splunk, Datadog, Prometheus, Grafana, Application Insights, Logging, Metrics, Alerting, Incident Response, Root Cause Analysis, SLOs, Error Budgets, Production Monitoring.
- **Mobile & Cloud:** iOS, Android, Physical Devices, Mobile Fragmentation, AWS, Azure, Docker, Kubernetes, Consumer-Scale Applications, Agile/Scrum, Production Readiness, Continuous Improvement.

Test Automation Engineer

PCMI LLC (Full Time)

Oct 2024 – Present

San Francisco, CA, USA

- Design and evolve automated quality infrastructure using **Python/C#, Playwright, REST APIs, SQL, and reusable framework components**, establishing scalable integration, end-to-end, regression, and performance coverage across enterprise applications.
- Define automation strategy and quality guardrails from the ground up by identifying critical user paths, selecting appropriate test layers, establishing test conventions, and prioritizing coverage based on production risk and business impact.
- Use **Claude, Cursor, and GitHub Copilot** daily to accelerate test authoring, generate edge cases, troubleshoot failed automation, refactor framework code, analyze logs, and identify missing regression protection.
- Integrate automated suites with **Azure DevOps, TeamCity, Git, and CI/CD pipelines**, enabling parallel execution and build-blocking quality gates that provide fast, reliable feedback before code advances toward production.
- Monitor application and test health using logs, metrics, traces, API telemetry, and failure trends while investigating anomalous behavior and participating in root-cause analysis for production-like incidents and recurring regressions.
- Track reliability indicators including test failure rates, execution duration, escaped defects, API latency, availability signals, and critical-path health while applying **SLO and error-budget concepts** to prioritize engineering improvements.
- Partner closely with developers and DevOps engineers to improve testability, review automation changes, strengthen release safeguards, resolve flaky tests, and embed quality thinking throughout feature development rather than only at release time.

Environments: Python, C#, Playwright, REST APIs, SQL Server, Azure DevOps, TeamCity, Git, CI/CD, Claude, Cursor, GitHub Copilot, Application Insights, Splunk, Production Monitoring, Quality Gates, SLOs, Error Budgets, Root Cause Analysis, Agile/Scrum.

SDET / QA Automation Engineer

Dec 2023 – Sept 2024

Client: CVS

San Francisco, CA, USA

- Built and maintained automated test coverage across consumer-facing healthcare web, mobile, API, and backend systems using **TypeScript, Playwright, Appium, Java, RESTAssured, and SQL**, emphasizing reliability, speed, and critical-user-path protection.
- Developed mobile automation for Android and iOS workflows using Appium and platform-aware testing practices while validating screen-size differences, OS behavior, backend integrations, and device-specific application failures.
- Integrated automated suites with **Jenkins, GitLab/GitHub, Git, and CI/CD pipelines**, executing tests on every relevant change, parallelizing regression workloads, and enforcing release-quality gates before deployment.
- Applied AI-assisted tooling to create automation scaffolding, discover edge cases, investigate flaky patterns, analyze production-like failures, and improve regression coverage while maintaining engineering review of generated changes.
- Used Splunk, logs, API traces, SQL diagnostics, and application metrics to monitor system behavior, investigate anomalies, support incident triage, and identify root causes across distributed healthcare application dependencies.
- Performed performance and reliability testing across API and mobile workflows, analyzing response time, throughput, concurrency, availability, and failure behavior while recommending improvements based on measured production risk.
- Collaborated with developers, DevOps engineers, and Product stakeholders to surface quality risks early, improve observability and testability, resolve recurring failures, and help teams release customer-facing functionality with greater confidence.

Environments: TypeScript, Java, Playwright, Appium, RESTAssured, Postman, SQL, Jenkins, GitLab/GitHub, Git, CI/CD, Splunk, Mobile iOS/Android Testing, AI-Assisted QA, Performance Testing, Observability, Incident Triage, Root Cause Analysis, Agile/Scrum.

Software Engineer

Sept 2021 – Dec 2022

Infor

Hyderabad, India

- Developed automated integration, API, regression, and end-to-end test suites using **Python, Java, Selenium WebDriver, Cucumber BDD, JUnit, TestNG, REST APIs, and SQL** across enterprise frontend and backend services.

- Built reusable framework utilities, test-data helpers, service abstractions, shared assertions, and execution components that improved maintainability and allowed broader automated coverage without significantly increasing suite runtime.
- Integrated automation with **Jenkins, Git, Maven, Docker, and CI/CD pipelines**, enabling automated build validation, continuous regression execution, and earlier identification of software failures during development.
- Performed backend and integration validation across REST services, databases, asynchronous workflows, and distributed dependencies while identifying failures that could impact availability or end-user experience.
- Investigated flaky tests and application failures using logs, API responses, SQL queries, timing analysis, and debugging, converting root-cause findings into systematic framework and product improvements.
- Executed load and performance scenarios using JMeter and service metrics to evaluate latency, throughput, stability, and failure behavior under concurrent workloads and production-like conditions.
- Worked with development and platform teams to strengthen automated coverage, improve CI reliability, evaluate tooling, and embed quality practices earlier in the software development process.

Environments: Python, Java, Selenium WebDriver, Cucumber BDD, JUnit, TestNG, REST APIs, SQL, JMeter, Jenkins, Git, Maven, Docker, CI/CD, Integration/E2E Testing, Performance Testing, Logging, Monitoring, Root Cause Analysis, Agile/Scrum.

Associate Engineer QA

June 2019 – August 2021

Virtusa

Hyderabad, India

- Developed and executed automated testing across web, mobile, API, and backend applications using **Java, Selenium WebDriver, Appium, Cucumber BDD, JUnit, TestNG, REST APIs, and SQL**.
- Built reusable functional, integration, regression, and end-to-end suites covering high-value user journeys while continuously identifying automation gaps and strengthening protection against recurring software regressions.
- Performed mobile validation across Android and iOS environments using Appium, testing user interactions, backend dependencies, network conditions, platform-specific behavior, and device-related application failures.
- Integrated regression suites with **Jenkins, Git, and CI/CD pipelines**, supporting automated execution on application changes, build-quality validation, and faster feedback throughout iterative delivery cycles.
- Investigated test and application failures using logs, screenshots, API responses, SQL queries, and debugging evidence while collaborating with developers to identify root causes and validate long-term fixes.
- Supported performance and reliability validation using JMeter, API diagnostics, and workload-based scenarios to identify response-time degradation, stability issues, and failure conditions before software releases.
- Collaborated with development and QA teams to improve test coverage, automation maintainability, release safeguards, defect prevention, and shared responsibility for delivering reliable production software.

Environments: Java, Selenium WebDriver, Appium, Cucumber BDD, JUnit, TestNG, Postman, REST APIs, SQL, JMeter, Jenkins, Git, CI/CD, Android/iOS Testing, Integration/E2E Testing, Performance Testing, Reliability Validation, Root Cause Analysis, Agile/Scrum.

AWARDS & ACHIEVEMENTS

- 2019-11 Oracle Certified Associate, JAVA SE8 Programmer.
- ISTQB Certified Professional.
- Microsoft Technology Associate (MTA) – Database Administration Fundamentals, HTML- 5 Application Development Fundamentals.
- Awarded “Software Process Achievement” Award for my contribution towards the project in Virtusa.
- Received Customer Appreciation mails for quality releases.
